REFINE - OBJECTIVES

The ultimate goal of the REFINE-project is **to contribute to the supply of sufficient and attractive financing sources to energy efficiency investments through enhancement of refinancing schemes** which are understood as important amplifier for market growth. Refinancing is an approach where an EES provider sells and a refinancing institution acquires receivables to be paid by an EES client.

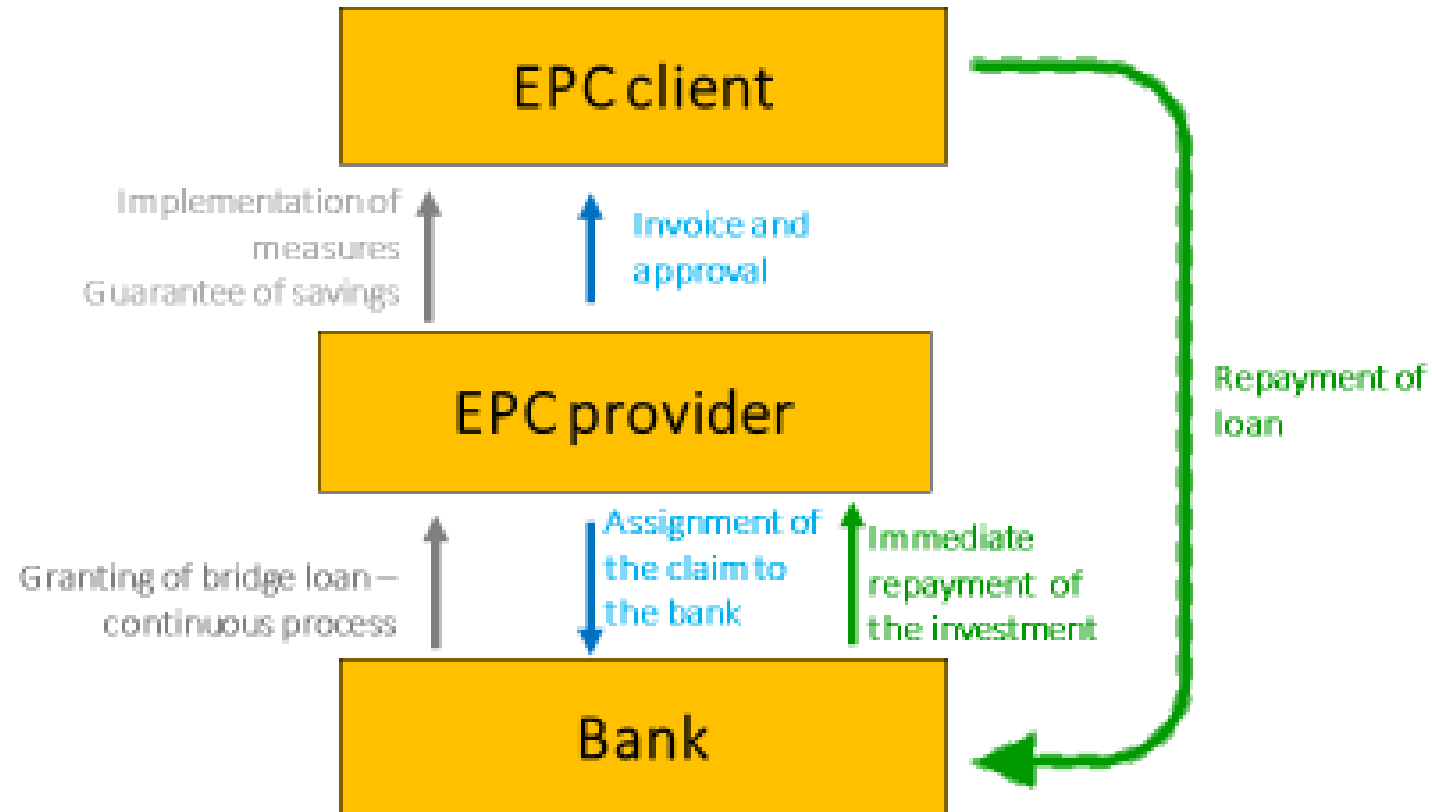

The project activities focus on the enhancement of refinanceability of energy efficiency projects, consisting of the following elements:

- Ensuring **admissibility of refinancing schemes** for energy efficiency projects;
- **reducing transaction cost** of refinancing schemes through standardisation;
- and **facilitating risk assessment** through increased **transparency and use of credit guarantees**.
